

# Avigilon Control Center™ 7 Software

## Video Security, Transformed

Avigilon Control Center (ACC) 7, our latest and most advanced version of ACC™ video management software, is designed to revolutionize how users interact with and gain situational awareness from their video security systems.

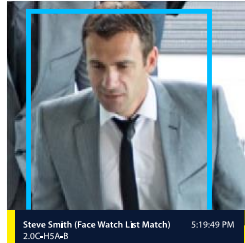

### Focus of Attention (FoA) Interface

A cutting-edge user ACC recognition technology times that leverages AI analytics the new people of interest are controlled watch list authorized users cameras be presented security operators. watch list

### Facial Recognition

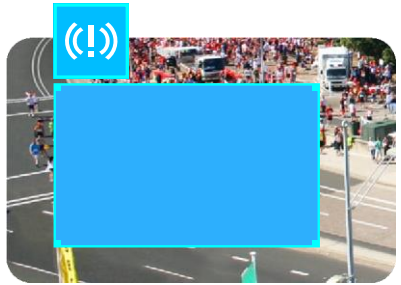

7 software incorporates AI-powered interface for live facial to help video monitoring organizations accelerate response by identifying people of interest. Through and video “appearance alerts” capability, technologies to identified based determine what on a secure, created information is and maintained by important and should at the organization. Avigilon to licensed for facial recognition will seek to identify potential matches based on the

and if a match is found, the user is alerted within the ACC software, helping security personnel quickly determine if further action is necessary.

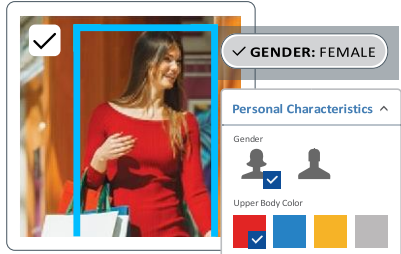

### Unusual Motion Detection

Advanced AI powered video search sorts what typical a scene looks like, with detects and locate a motion or vehicle of across an entire site or may have otherwise been missed. the same ACC software. Search for EMBEDDED IN entering a physical description, or by finding an example in

### Avigilon Appearance Search Technology

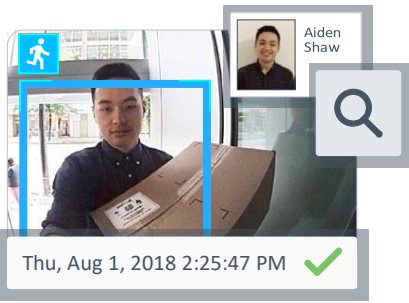

Sophisticated Altechnology that continuously learns engine that activity through hours of video in ease to help quickly and then specific person flags unusual interest to reveal events that

### Access Control Unification

ACC software works together with the Access Control Manager (ACM) system to receive and act on ACM™ door events, hardware input events and access grants, enabling operators to unlock access doors directly from a camera view.

**Identity Verification** dynamically displays ACM credentials with ACC camera views.

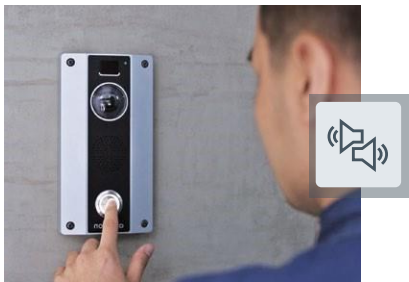

**Identity Search** can help find a person of interest using their ACM cardholder information.

### Cybersecurity & Privacy Protection

ACC security measures include strong password enforcement, connection authentication and data encryption, as well as strict user permissions to access search functionality that uses personally-identifiable information.

**Blurred Export** supports compliance with new data protection and privacy requirements of GDPR\* by allowing you to export Appearance Search results in ACC software while blurring the background of the camera view to feature only the person of interest in the video.

### H4 Video Intercom Support

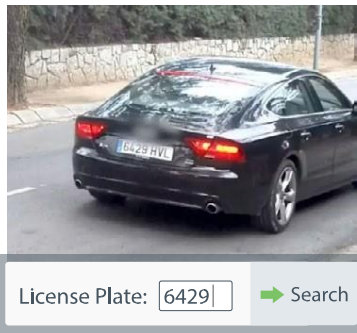

Enables operators to monitor and control access at entry points through two-way audio communication, video verification, and the ability to send a door grant through ACC software.

### License Plate Recognition Analytics

Automatically reads license plate information from vehicles, linking it to both live and recorded video. Create and import multiple vehicle license plate watch lists for instant alarm notification when a license plate match is detected, or search and quickly find specific captured license plate video for verification and investigation.
