

Overview

Mobile building & network access has generated a tremendous amount of interest over the past few years, offering organizations the ability to migrate to a single mobile identity for each employee. The advantages of a mobile identity include the elimination of plastic card management, and the cost savings with a BYOD (bring your own device) infrastructure. For many organizations migrating to mobile access, they have seen the savings pay for the cost of the upgrade. Whether you are attracted to mobile access because of on its convenience, cost savings, or the desire to build a future IoT infrastructure the fact is mobile access is here to stay.

Solution

With a mobile upgrade to an existing system in most cases the existing readers can remain permitting migration of staff over time as budgets permit. If you carry multiple plastic credentials they can be consolidated into a single mobile APP, including RFID, barcodes and ID cards.
